# TOWING BASICS

## Gross trailer weight (GTW)

The gross trailer weight is the total weight of a trailer and its cargo. For example, GTW = boat + trailer + cooler + fishing gear. It is vitally important to know the GTW to ensure safe towing.

## Weight carrying capacity (WC)

The weight carrying capacity is the total weight a trailer hitch is safely rated to tow without the assistance of a weight distribution system. When towing, the weight capacity is always limited to the lowest-rated towing component.

## Tongue weight (TW)

Tongue weight is the downward force of the trailer at the coupling point. Proper TW should be about 10% to 15% of the GTW. TW can be measured using a commercial scale or bathroom scale\*, following the method below.

### Multiply scale reading by three

\*only use a scale capable of estimated TW

## Weight distribution capacity (WD)

The weight distribution capacity is the maximum amount of weight a trailer hitch can safely tow with a weight distribution hitch installed. A weight distribution hitch distributes a portion of the TW across the vehicle and trailer to promote level towing. See page 174 for WD products.

## Measuring ball mount drop and rise

When selecting a ball mount, it is important to determine drop / rise for leveling the trailer. Use the diagram below to find this value. B minus A equals C. If C is negative, this indicates the amount of drop needed. If positive, it indicates rise.

## Level towing

Using a ball mount with the proper amount of drop or rise will allow for level towing across the trailer and vehicle. Without a level vehicle-trailer connection, the trailer may wander or sway and can lead to the driver's loss of control, leading to an accident.

Too much rise or drop

## COMFORT. CONTROL. CONFIDENCE.

### SHOCKDROP™ TECHNOLOGY

For Rebellion™ XD cushion hitches see page 98

ShockDrop technology is an adaptive, dynamic towing system that is engineered to reduce vibrations, rattling and strain on the vehicle. It does this by using an integrated, flexible polyurethane isolator for improved comfort and control. Compared to other cushion hitch options, ShockDrop is simple and virtually maintenance-free.

#### Enhanced comfort.

Unlike a traditional metal-on-metal towing connection, ShockDrop absorbs unevenness in the road to maximize comfort

#### Improved control.

ShockDrop dynamically reacts to jarring, limiting its effects and giving the driver increased control on the road

#### Low maintenance.

Unlike a cushion hitch with an airbag or bearings, ShockDrop is virtually maintenance-free and is tested for thousands of cycles

### ROCKERBALL™ STARTER KITS

- Includes all the accessories needed to complement a trailer hitch in one kit

# SECURELATCH™ SERIES AUTO-LOCKING TECHNOLOGY

SecureLatch™ streamlines the trailer hookup process with a revolutionary auto-locking design. Unlike any other coupling device, the primary latching mechanism automatically locks into place as you back up to the coupler. No manual coupling required! Simply insert the secondary safety pin, and you're ready to tow.

Scan to  
learn more

## How Auto-Locking Technology Works

1. Strike the plate.

As you back up the vehicle, a built-in back plate helps position the coupler or lunette ring for easier hookup

2. Lower the trailer.

As the coupler is lowered onto the pintle hitch, SecureLatch automatically locks without any manual coupling required

3. Tow with confidence.

Finally, insert the secondary safety pin, connect the safety chains and you're ready to tow with confidence and without chucking

## What Makes Securelatch™ Different?

Auto-locking system, no manual coupling

Available in various configurations

Austempered, cast iron for superior strength and wear resistance

Built-in back plate for easier hookup

Integrated safety chain hangers

Cupped hook reduces chucking and noises

## Offering a full series of hooks, mounts, channels and lunette rings!

# TOWING ELECTRICAL SUBCATEGORY COLOR GUIDE

## WIRING SYSTEMS

### Two-wire system

The two-wire system is the simplest form of vehicle and trailer wiring and is still used by some vehicles today. This system sends the stop and turn signals along one wire, and the taillight signal along a second wire.

### Three-wire system

The three-wire system is the most common in the automotive industry. It sends the stop, taillight and turn signals along three separate wires. Vehicles with this system usually require a converter.

### PWM system

More and more vehicles today use a PWM (pulse width modulation) system. Sometimes called a 'multiplex', this type of wiring is able to control multiple lighting functions through a single wire by varying the signal intensity. PWM systems can use incandescent or LED lights. There are generally two types: ST systems and STT systems.

On vehicles with two-wire electrical systems that require a powered converter, the converter's red wire is not used as a stoplight connection and needs to be grounded.

**ELECTRICAL CONVERTERS**

## TAILLIGHT CONVERTERS

**ESD** - Electrostatic Discharge  
**PWM** - Pulse-Width Modulation  
**SMT** - Surface Mount Technology

For vehicles that are not compatible with CURT custom wiring options, a taillight converter provides a reliable alternative. CURT taillight converters splice into the vehicle's wiring system and provide a standard 4-way flat trailer connector. **Use the application guide on page 28 to find the right wiring solution for your customer.**

# CUSTOM WIRING & T-CONNECTORS

For custom wiring applications go to page 28

Custom wiring is the easiest way to equip a vehicle with a trailer wiring connection. There are two types: harnesses and connectors. Both are made vehicle-specific and install with no cutting or splicing.

- Provides a standard 4-way flat connector on the vehicle for plugging in trailer wiring
- Simple plug-and-play design eliminates the need for cutting or splicing
- Equipped with a taillight converter if needed
- Dust cover included to keep 4-way flat clean when not in use

## Harnesses

Custom wiring harnesses use multiple plugs to 'T' into the taillight assembly

## Connectors

Custom wiring connectors use a single plug to plug into a specific OEM socket

## MOUNTING OPTIONS

### ALL-NEW Trailer-Mounted

#### Advantages

- Patent-pending trailer-mounted design simplifies coupling and decoupling
- Independent, two-part system eases lifting by keeping hitch weight on trailer
- Upgraded spring bar and handle mechanism

### Classic Hitch-Mounted

#### Advantages

- Capacity ratings from 5k - 15k
- Optional shank-free version for deeper drop applications (#17600); shank sold separately

## INTEGRATED SWAY CONTROL

### How 2-Point (2P) Passive Sway Control Works

#### Friction resistance

Integrated sway control arms use friction to resist movement and keep the trailer aligned

#### Increased control

Heavy-duty, adjustable support brackets provide two points of passive sway control

# INTEGRATED SWAY CONTROL (CONTINUED)

## How 4-Point (4P) Active Sway Control Works

Spring-loaded bearings actively align trailer

Scan to learn more

Bearings within the head maintain pressure on the spring bars, actively aligning the trailer with the vehicle

### Active resistance

Lateral forces compress the bearings into a rotational groove to actively resist sway. The larger the sway event, the greater the resistance applied by the WD hitch

### Increased control

Upward force on the ends of the spring bars tensions the bearings, directing them towards the 'home' position, increasing sway control

### Smooth turning

During turns the bearings compress, allowing them to rotate freely. Afterwards they return to their tensioned, home position

# 5TH WHEEL MOUNTING OPTIONS

## OEM Puck System Products

Puck system legs and adapters use a simple quarter-turn anchor system to easily and securely drop into the truck bed pucks built into many pickups today.

- Options available for Ford, GM, Nissan and Ram
- Compatible with most CURT 5th wheel hitches
- **See page 210 for long- and short-bed options**

## 5th Wheel Sliders

CURT sliders and rollers provide 12" of additional clearance between the truck cab and trailer, displacing the 5th wheel coupling point for making tight turns.

- Ideal for increasing clearance for short-bed trucks
- Available in 20K and 25K capacities
- **See page 212 for full features and benefits**

## Custom Under-Bed Brackets

Each designed to fit a specific truck application, our custom brackets install in less time and provide a solid mount for our industry-standard base rails.

- Vehicle-specific fit reduces or eliminates drilling
- Protected by a rust-resistant liquid A-coat
- **See page 213 for application information**

## Industry-Standard Base Rails

CURT industry-standard base rails accept any 5th wheel hitch with industry-standard mounting points. They are available in capacities of 25K and 40K.

- Durable powder coat finish in multiple color options
- Co-cured in a rust-resistant liquid A-coat
- **See page 213 for application information**

## X5™ Adapter Plates

X5 adapter plates allow a gooseneck hitch to become a 5th wheel mount. They drop into the gooseneck hole and provide a set of industry-standard base rails.

- Compatible with EZr™, Double Lock™ and select competitor models
- Compatible with CURT 5th wheels up to 20,000 lbs.
- **See page 216 for full features and benefits**

## 5th Wheel Accessories

We offer a number of accessories to help improve 5th wheel operation and safety while towing, including 5th wheel wedges, locks, noise dampeners and more.

- Lube plates and sound pads for smooth operation
- Safety chain loops and locks for improved safety
- **See pages 217 - 219 for 5th wheel accessories**

# MOUNTING A 5TH WHEEL HITCH

There are several components that make up a 5th wheel hitch, and these components are determined by truck type and customer preferences. Answer the following questions to help choose the right hitch for your customer.

## What Size is the Truck Bed?

The length of the truck bed will determine which type of mounting platform the 5th wheel hitch requires: legs or a slider. **Review each configuration and ensure adequate clearance before purchase.**

### Long-bed (8 feet)

5th wheel legs are the standard 5th wheel mounting method. A long-bed truck should provide the necessary room for this option.

### Short-bed (under 8 feet)

A 5th wheel slider is recommended on short-bed trucks. A slider adds clearance between the cab and the trailer when turning.

## Measuring for a 5th wheel roller

1. Trailer width  $\div 2 = X$
2. Distance from truck cab to coupling point = Y
3. Truck-trailer clearance:  $Y - X = Z$

If Z is negative  
you need a  
5th wheel slider

## OEM PUCK SYSTEMS

Many trucks today, specifically from Ford, GM, Nissan and Ram, come with a built-in mounting platform in the bed called a puck system. A puck system makes installing a CURT 5th wheel hitch very easy.

### Long-bed with OEM puck system

If the long bed has a puck system, select a 5th wheel hitch with OEM puck system legs or rails.

[See our complete kits starting on page 203.](#)

### Short-bed with OEM puck system

If the short bed has a puck system, select an OEM puck system slider or rail option to mount the 5th wheel.

[See our complete kits starting on page 203.](#)

2. See page 213 for corresponding base rails.

## 5TH WHEEL WEDGES

A rotating 5th wheel pin box creates an alternative pivot point for the 5th wheel connection, providing the 5th wheel trailer with a wider turn radius. However, because of this secondary pivot point, the primary pivot point must be fixed to keep the trailer from wandering. A 5th wheel wedge bolts onto the pin box, locks up the kingpin and keeps it from swiveling.

- Allows CURT 5th wheel hitches to be used with rotating pin boxes, such as Sidewinder™ and Turning Point®
- Bolts on behind the kingpin of the pin box to restrict movement between 5th wheel hitch and pin box
- Durable carbide black powder coat finish
- Made in USA (may include imported hardware)

Restricts movement between the 5th wheel hitch and the rotating pin box, such as Sidewinder or Turning Point

# SELECTING A GOOSENECK HITCH

There are three basic methods for installing a gooseneck hitch:

## A | OEM PUCK SYSTEM OPTIONS

Many pickups today are factory-equipped with a truck bed puck system. A puck system provides attachment points for both gooseneck and 5th wheel towing.

For trucks with a puck system, an OEM puck system gooseneck kit is the easiest way to tow a gooseneck trailer. The components can be installed or removed quickly, as necessary.

See page 244 to select one of these kits.

## B | HITCH & BRACKET OPTIONS

The traditional method for installing a gooseneck hitch on trucks without factory-installed puck systems are vehicle-specific brackets. CURT OEM-style gooseneck hitches are a unique variant of the traditional method, featuring an all-in-one, custom-fit design that bolts to the truck frame like a factory hitch. No additional brackets required. See page 248 for our OEM-style hitches.

We also offer a variety of traditional gooseneck hitches that mount with vehicle-specific brackets. Options include our Double Lock EZr™, original Double Lock™ and more. Start on page 250 for our traditional gooseneck hitch line.

## C | EXISTING 5TH WHEEL BASE RAIL OPTIONS

For trucks with 5th wheel rails already installed, CURT offers 5th wheel rail gooseneck hitches. These 5th-wheel-to-gooseneck adapters easily drop into any industry-standard base rails.

A 5th wheel rail hitch provides a ball ready for towing a gooseneck trailer, and the hitch can easily be removed from the rails whenever necessary to allow for 5th wheel towing or clearing the bed for cargo.

See page 258 for 5th wheel rail goosenecks.

## OEM PUCK SYSTEM GOOSENECK KITS

Available for Chevrolet, Ford, GMC, Nissan and Ram, these kits utilize the truck bed puck system built into select pickups with the factory installed towing prep package (see table below). The ball and anchors easily drop into the pucks, lock into place and are immediately ready to couple to a gooseneck trailer.

### Each kit includes:

- 2-5/16" gooseneck ball
- Two safety chain anchors with zinc-plated locking pins
- Rubber hole cover
- Durable storage case

### Quarter-turn anchoring system

**Step 1** - Lift and twist latch to release the retention balls

**Step 2** - Drop the ball into OEM puck system hole

**Step 3** - Return latch to lock the ball in place for towing

Large safety chain openings accept heavy-duty hooks

Installation of these products requires an OEM truck bed puck system (see above example, Ram puck system)

## MAKE SAFETY A PRIORITY WHEN YOU TOW

### PROPER SAFETY CHAIN USAGE

Safety chains are required by law and should be crossed under the tongue of the trailer so that the tongue will not drop to the road if it becomes separated from the hitch. Always leave enough slack so the vehicle can safely turn. Never allow the safety chains to drag on the ground and never attach the chains to the bumper.

Proper safety chain routing crosses under the coupler

### SAFETY CHAINS WITH S-HOOKS

# LIMITED LIFETIME WARRANTY

CURT provides limited lifetime warranty coverage against defects in factory workmanship and materials for CURT products ("Products") sold by factory authorized dealers for use by retail (end use) consumers. This Limited Warranty is provided only to the original Product consumer, and applies only to the original installation. This Limited Warranty is not transferrable and does not extend or apply to anyone else. For consumers in the U.S.: this Limited Warranty gives you specific legal rights; you also may have other rights, which vary from state to state.

This Limited Warranty is the sole and exclusive warranty provided by CURT, and all other warranties and conditions are excluded and disclaimed. **UNDER THE LAW OF CERTAIN STATES, THERE MAY BE NO IMPLIED CONDITIONS OR WARRANTIES FROM CURT APPLICABLE TO YOUR PRODUCT, AND ALL IMPLIED CONDITIONS OR WARRANTIES (INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE) ARE EXCLUDED AND DISCLAIMED WHERE ALLOWED BY LAW.** If implied warranties are imposed under any applicable state law, all such implied warranties are limited to the duration of the applicable provisions of this Limited Warranty. For consumers in the U.S.: some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.

## COVERED PRODUCTS AND LIMITATIONS

CURT provides the following Limited Warranty coverage:

Product	Workmanship & Materials	Components & Parts	Finishings & Coatings
Hitches	Lifetime	1-year	1-year
Brake controllers	Lifetime	1-year	1-year
Electrical and wiring	1-year	1-year	1-year
Other accessories	Lifetime	1-year	1-year

Each of the warranty coverage periods runs from the date of purchase of the Product (proof of purchase is required) and applies only to warranted defects that first occur and are reported to CURT within the applicable warranty period. CURT retains the right to determine to its reasonable satisfaction whether any claimed defect is covered by this Limited Warranty.

Certain items are excluded from Limited Warranty coverage by CURT, and this **Limited Warranty coverage does not apply to:**

- Wear and tear from normal use, including damage from road debris
- Improper product selection, application, installation or maintenance
- Modifications, including the attachment of other hardware or components
- Misuse, abuse, overloading, improper trailering or hauling, accident
- Corrosion or damage due to environmental conditions

## REMEDIES UNDER THIS LIMITED WARRANTY

If a defect covered by this warranty occurs, CURT will repair or replace the Product, or refund the purchase price, in its sole discretion. This "repair, replacement or refund" remedy is the **sole and exclusive remedy** under this Limited Warranty. CURT has **no responsibility or liability for any incidental or consequential damages**, such as loss of use of vehicles or trailers, towing charges, storage charges, labor and service charges for removing or reinstalling products, loss of or damage to personal property, or interest or finance charges, all of which are specifically **excluded and disclaimed** from this Limited Warranty. For consumers in the U.S.: some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

## RESPONSIBILITY OF PURCHASER

The Purchaser must have proof of purchase to obtain service under this Limited Warranty. Contact CURT for a Returned Goods Authorization (RGA) and return instructions; CURT will not accept Products unless an RGA has been issued. The Purchaser must deliver the Product to CURT or an authorized CURT dealer along with the RGA number and proof of purchase.

The CURT Limited Warranty policy in effect on the date you purchased your Product determines the applicable warranty coverage, and subsequent or prior CURT warranties are not applicable to your Product. The terms of this Limited Warranty cannot be changed or modified, except by a written agreement signed by an officer of CURT. CURT reserves the right to improve its products through changes in design or materials without being obligated to the owners of the Products of the same or similar models.
